ZPD is Pioneering Solutions for Deer Farmers Amidst Persistent Challenges in 2025

By Brian Kanke
Chairman of Zoo Pharma Dynamics

The new year 2025 has arrived with the same problems we ended 2024 with. You might think I dislike sheep; I do not. I'm from a fourth-generation sheep farming family. Sheep are a necessity for many reasons. My facts about sheep may appear to blame them for Chronic Wasting Disease (CWD). I'm not blaming sheep, as the sheep had no say in their movement or life. I am showing the possible source of CWD in this soil, if it wasn't already here before the sheep, but there's no way to know.

What we do know is that sheep carried the disease to U.S. soil, possibly in the 1620s or more likely around the 1940s. We don't hear much in the news about scrapie, the same prion disease that causes CWD, and no one is attempting to shut down sheep farms. We can bypass the politics that deer farmers are having to endure and fight daily to save their farms. I know this because I am also a deer farmer. Let's move to fighting this disease with a viable solution.

Zoo Pharma Dynamics (ZPD), over the last 12 years, has been researching and developing a preventative and cure for CWD. We have been conducting field trials with success. We would like to do more field trials and assist other deer farmers fighting against CWD. ZPD does not charge for field trials. We use an additive we formulated called "CPP" (Cervid Prion Preventative). Our additive can be added to the mix of a feed pellet, protein block, or water-soluble supplement. We produce pellets containing CPP and our water-soluble supplement at our South Texas Research Facility for field trials. Our product Prion D destroys the prion on contact for disinfecting.

Zoo Pharma Dynamics will do an assessment and find the best possible course of action for your deer farm or ranch. There are many factors that determine outcomes, but given enough time, the desired result can be achieved. As much as we all love miracles, they usually don't happen, but the overall picture can be understood when looking at statistics and percentages.

In medicine, there is never a cure-all, but a high percentage of cure rate is the realistic goal. Our formula contains the two ingredients known to destroy the prion on contact. Our research and development have provided the other ingredients required to destroy the prion within the functioning system of a cervid. Our product CPP has been in the new drug approval process with the FDA/CVM, and we hope to finalize the process in early 2025. ZPD encourages you to reach out to us to discuss a field trial, visit our facilities, or ask any questions. We fully believe CWD can be controlled with willing and active participation.

DID YOU KNOW?

- First Sheep England Exported to US 1620s
- First Sheep positive for Prion Disease in England 1732
- 56 Million Sheep in the US in 1945, today 6 Million
- First known positive in US 1947
- More than 1600 confirmed cases of Scrapies in US
- Sheep Free grazed for years on majority of grasslands
