## REVOLUTIONIZING ANIMAL HEALTH:

### Pioneering Sustainable Solutions for Livestock and Pets Through Innovative Research & Development

By Brian Kanke  
Chairman of Zoo Pharma Dynamics

The health of animals, whether livestock or pets, is inextricably linked to the wellbeing of people and planet. This means that better animal health is crucial for sustainability. Healthier animals require fewer natural resources, enabling them to provide more food, labor, fertilizer, companionship, and assistance while consuming less feed, water, and land.

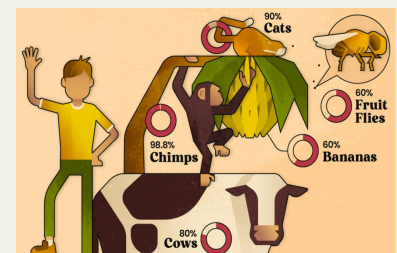

Our unorthodox methods to gather and analyze data, which we then immediately apply to real-time situations, positioning us at the forefront of problem-solving and scientific innovation. Our own research and manufacturing facilities, complete with a cutting-edge laboratory, allow us to develop, formulate, manufacture, and field-test products all in one location, sometimes within a single day. We have strong strategic partnerships within the animal healthcare industry that support our operations and serve as a third-party verification of our data.

By studying history, we can uncover valuable insights and explanations for events. Our research and development process incorporates cartography to examine geographical changes in the environment, including impacts on landscapes. For instance, we have used historical information to understand and combat a disease that first emerged in a foreign country in 1732 before appearing in the United States 250 years later. By analyzing data spanning from 1732 to the present, we have successfully fought against this disease.

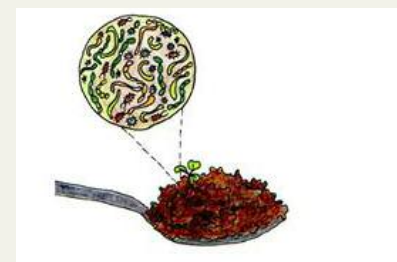

Despite varying regulations on the disease treatment from state to state, our research and development efforts remain consistent. We have developed Cervid Prion Preventive (CPP) to combat Chronic Wasting Disease (CWD), a supplement that is pending patent approval and undergoing the new drug approval process with the FDA/CVM. We are confident that we will receive full approval for CPP, which can be added to feed mixes or used as a water-soluble supplement manufactured at our facility. Through field trials using CPP, we collect and analyze data, which is then verified by third parties. Our confidence in the results of our research is unwavering.

We welcome those interested in our research and development to visit our facilities. Visitors have the opportunity to learn about our findings and solutions firsthand. To schedule a visit, please contact us via email. ■

#### Did You Know?

- Humans have genes from other species.
- There are more trees on Earth than stars in our galaxy.
- In just one teaspoon of soil, there are more microorganisms than people on the planet.
- The first recorded clinical trial is mentioned in the Bible.
