## Let the Cows Fart and Burp

By Brian Kanke  
Chairman of Zoo Pharma Dynamics

I want the cows and any other animal to fart and burp as often as they need to, so they are comfortable.

I attended a conference in Boston in the middle of June and was very surprised to learn that there is a push to move to plant proteins for survival. I'm sorry we humans are carnivores. We are designed to eat meat for survival and for health reasons. We are not designed to live from eating plants alone.

If we stopped eating meat, we would throw the eco system so far out of balance it might not be recoverable.

Our carbon footprint is at minimal levels and should be higher to sustain better plant growth. The reason for better plant growth is not to feed us humans but to feed the animals that live on plants, so we have more and better meat to eat. The whole vegan diet is not healthy, you are missing out on nutrients you can only get from meat and by not eating meat you are damaging the environment.

The more plants we have the cleaner the air and more oxygen. I find oxygen to be the number one thing needed for survival, without oxygen you don't have to worry about drinking or eating, your dead. The scientific facts are all there but the majority of which are mostly uneducated in the facts choose to put out false theories.

We have heard for the last 50 years the world has been coming to an end on this date, that date or another date. They have all been misinformation at its finest. God put the animals on the planet for a reason; they are a food source for our survival, and he expects us to be good stewards of the land. Therefore, making sure we have plenty of plants for the animals to eat so they in turn can grow and feed us. Read the bible not some opinion piece from some conspiracy theorist. The facts are the facts.

We keep the carbon level up we have more plants and in turn we have more meat to eat. If you chose to be Vegan, thank you, I will eat your share of meat and be happy and healthy. I am also doing my intended role in the eco system keeping the circle of life on track.

### Carbon Footprint Facts

- CO2 levels in crowded indoor spaces, such as classrooms, courtrooms, and trains, commonly reach 2,000 ppm — with no clinically documented ill effects to people.
- The U.S Navy strives to keep CO2 levels in its submarines below 5,000 ppm.
- Greening of the Earth from higher levels of CO2 occurred from 1986 to 2006.
